

NOTE: THE FIGURES IN THIS SECTION ARE INTENDED TO SHOW THE REPRESENTATIVE DATA.  
THEY ARE NOT MEANT TO BE COMPLETE COMPILED OF ALL THE WORLD'S RELIABLE DATA.

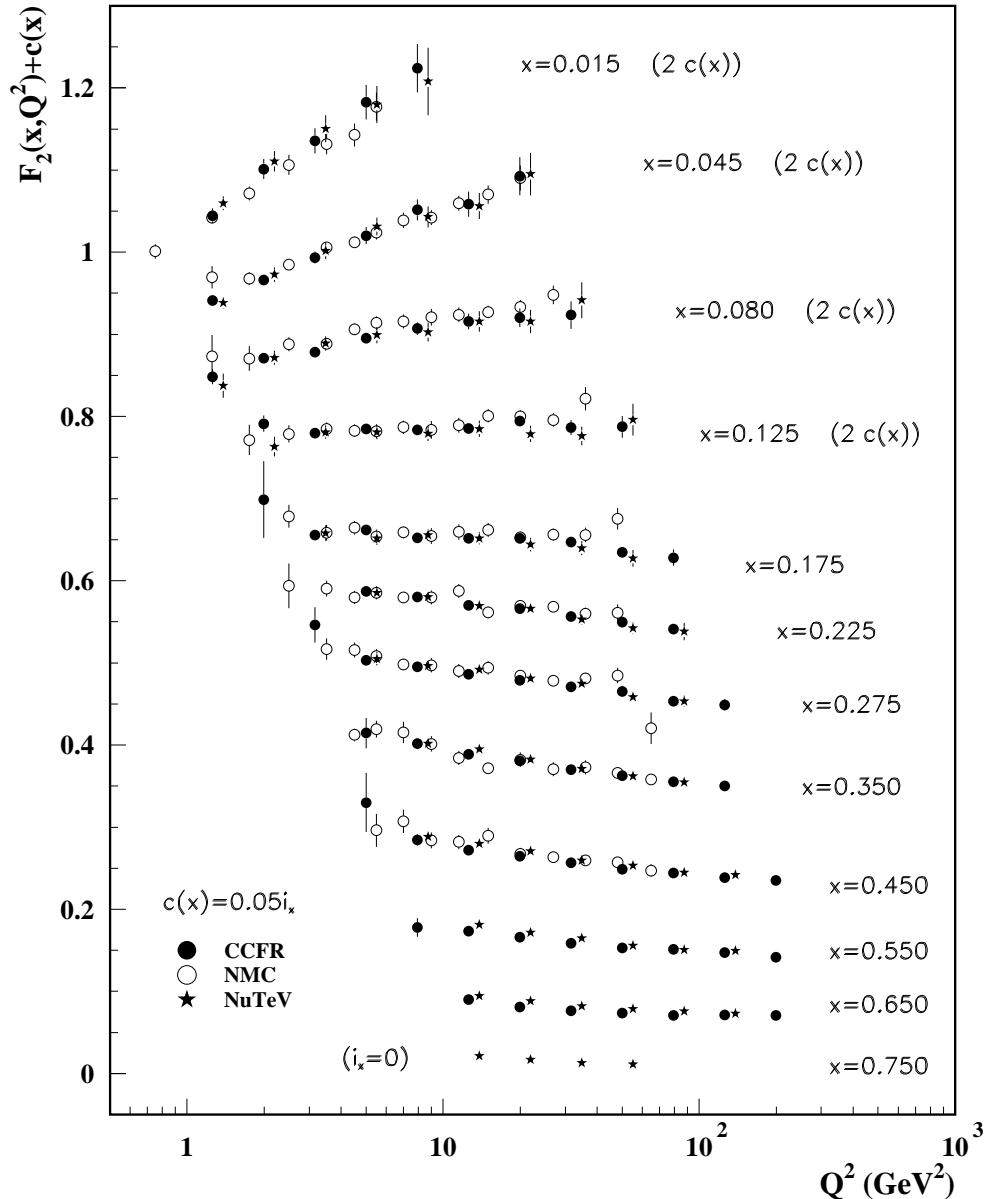

**Figure 16.7:** The proton structure function  $F_2^p$  measured in electromagnetic scattering of positrons on protons (collider experiments ZEUS and H1), in the kinematic domain of the HERA data, for  $x > 0.00006$  (cf. Fig. 16.10 for data at smaller  $x$  and  $Q^2$ ), and for electrons (SLAC) and muons (BCDMS, E665, NMC) on a fixed target. Statistical and systematic errors added in quadrature are shown. The data are plotted as a function of  $Q^2$  in bins of fixed  $x$ . Some points have been slightly offset in  $Q^2$  for clarity. The ZEUS binning in  $x$  is used in this plot; all other data are rebinned to the  $x$  values of the ZEUS data. For the purpose of plotting,  $F_2^p$  has been multiplied by  $2^{i_x}$ , where  $i_x$  is the number of the  $x$  bin, ranging from  $i_x = 1$  ( $x = 0.85$ ) to  $i_x = 28$  ( $x = 0.000063$ ). Chekanov *et al.*, Phys. Rev. **D70**, 052001 (2004); **BCDMS**—A.C. Benvenuti *et al.*, Phys. Lett. **B223**, 485 (1989) (as given in [56]); **E665**—M.R. Adams *et al.*, Phys. Rev. **D54**, 3006 (1996); **NMC**—M. Arneodo *et al.*, Nucl. Phys. **B483**, 3 (1997); **SLAC**—L.W. Whitlow *et al.*, Phys. Lett. **B282**, 475 (1992).

## 2 16. Structure functions

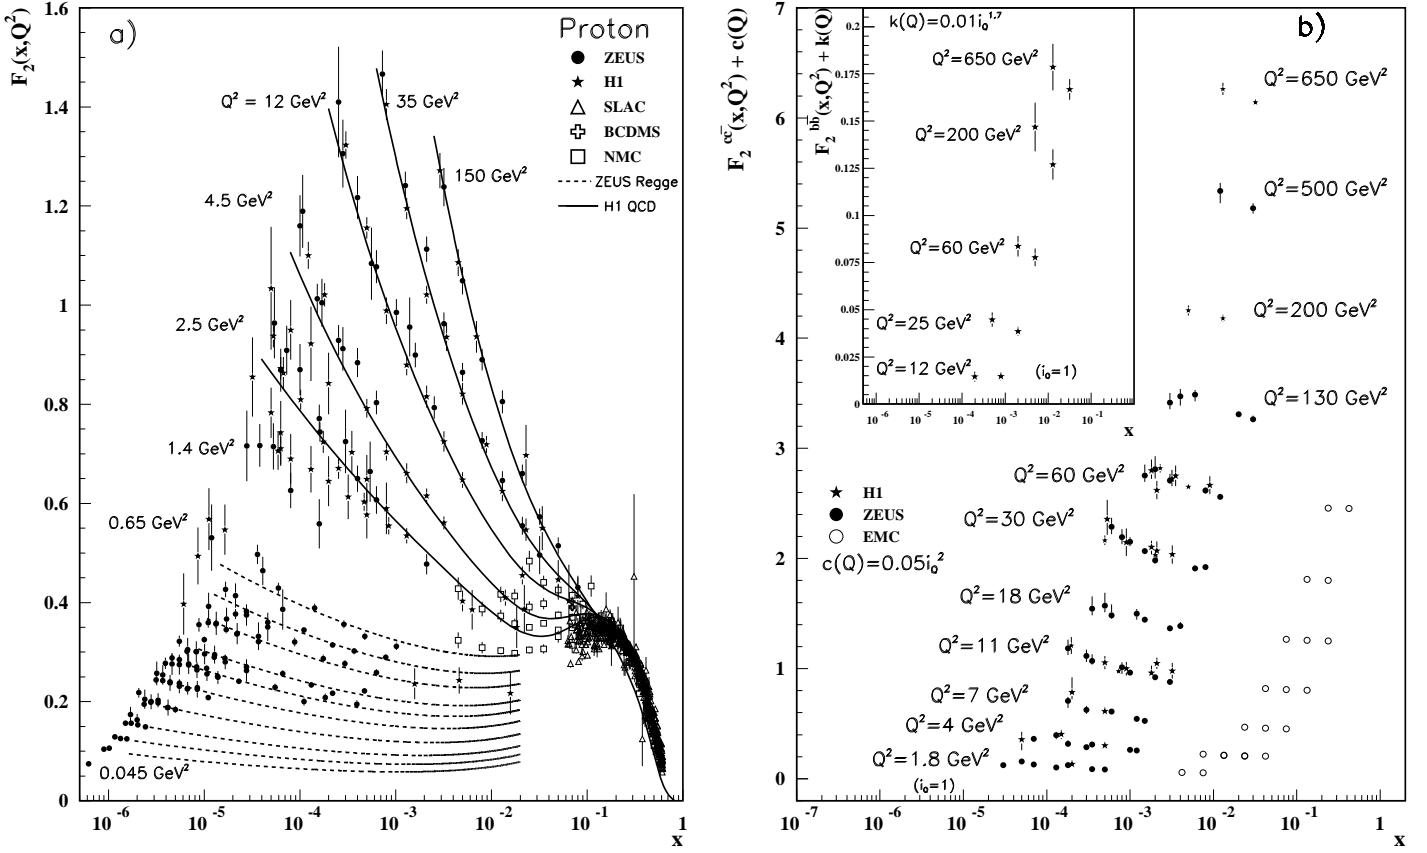

**Figure 16.8:** The deuteron structure function  $F_2^d$  measured in electromagnetic scattering of electrons (SLAC) and muons (BCDMS, E665, NMC) on a fixed target, shown as a function of  $Q^2$  for bins of fixed  $x$ . Statistical and systematic errors added in quadrature are shown. For the purpose of plotting,  $F_2^d$  has been multiplied by  $2^{i_x}$ , where  $i_x$  is the number of the  $x$  bin, ranging from 1 ( $x = 0.85$ ) to 29 ( $x = 0.0009$ ). References: **BCDMS**—A.C. Benvenuti *et al.*, Phys. Lett. **B237**, 592 (1990). **E665**, **NMC**, **SLAC**—same references as Fig. 16.7.

**Figure 16.9:** The deuteron structure function  $F_2$  measured in deep inelastic scattering of muons on a fixed target (NMC) is compared to the structure function  $F_2$  from neutrino-iron scattering (CCFR and NuTeV) using  $F_2^\mu = (5/18)F_2^\nu - x(s + \bar{s})/6$ , where heavy-target effects have been taken into account. The data are shown versus  $Q^2$ , for bins of fixed  $x$ . The NMC data have been rebinned to CCFR and NuTeV  $x$  values. Statistical and systematic errors added in quadrature are shown. For the purpose of plotting, a constant  $c(x) = 0.05i_x$  is added to  $F_2$ , where  $i_x$  is the number of the  $x$  bin, ranging from 0 ( $x = 0.75$ ) to 7 ( $x = 0.175$ ). For  $i_x = 8$  ( $x = 0.125$ ) to 11 ( $x = 0.015$ ),  $2c(x)$  has been added. References: **NMC**—M. Arneodo *et al.*, Nucl. Phys. **B483**, 3 (1997); **CCFR/NuTeV**—U.K. Yang *et al.*, Phys. Rev. Lett. **86**, 2741 (2001); **NuTeV**—M. Tzanov *et al.*, Phys. Rev. **D74**, 012008 (2006).

#### 4 16. Structure functions

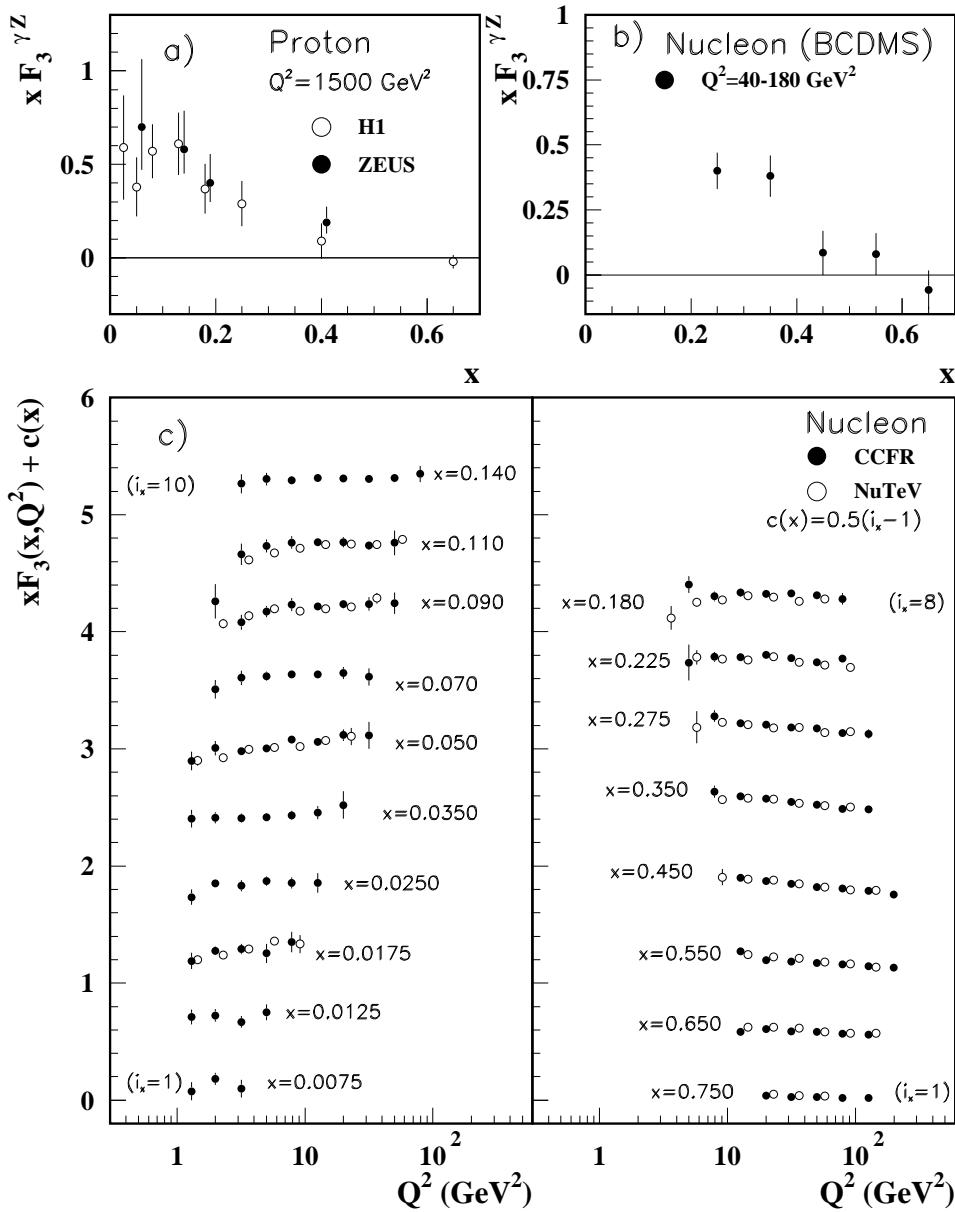

**Figure 16.10:** a) The proton structure function  $F_2^p$  mostly at small  $x$  and  $Q^2$ , measured in electromagnetic scattering of positrons (H1, ZEUS), electrons (SLAC), and muons (BCDMS, NMC) on protons. Lines are ZEUS and H1 parameterizations for lower (Regge) and higher (QCD)  $Q^2$ . The width of the bins can be up to 10% of the stated  $Q^2$ . Some points have been slightly offset in  $x$  for clarity. References: **ZEUS**—J. Breitweg *et al.*, Phys. Lett. **B407**, 432 (1997); J. Breitweg *et al.*, Eur. Phys. J. **C7**, 609 (1999); J. Breitweg *et al.*, Phys. Lett. **B487**, 53 (2000) (both data and ZEUS Regge parameterization); S. Chekanov *et al.*, Eur. Phys. J. **C21**, 443 (2001); S. Chekanov *et al.*, Phys. Rev. **D70**, 052001 (2004); **H1**—C. Adloff *et al.*, Nucl. Phys. **B497**, 3 (1997); C. Adloff *et al.*, Eur. Phys. J. **C21**, 33 (2001) (both data and H1 QCD parameterization); C. Adloff *et al.*, Eur. Phys. J. **C30**, 1 (2003); A. Aktas *et al.*, Phys. Lett. **B598**, 159 (2004); **BCDMS**, **NMC**, **SLAC**—same references as Fig. 16.7.

b) The charm structure function  $F_2^{c\bar{c}}(x)$ , i.e. that part of the inclusive structure function  $F_2^p$  arising from the production of charm quarks, measured in electromagnetic scattering of positrons on protons (H1, ZEUS) and muons on iron (EMC). The H1 points have been slightly offset in  $x$  for clarity. For the purpose of plotting, a constant  $c(Q) = 0.05i_Q^2$  is added to  $F_2^{c\bar{c}}$  where  $i_Q$  is the number of the  $Q^2$  bin, ranging from 1 ( $Q^2 = 1.8 \text{ GeV}^2$ ) to 11 ( $Q^2 = 650 \text{ GeV}^2$ ). References: **ZEUS**—J. Breitweg *et al.*, Eur. Phys. J. **C12**, 35 (2000); S. Chekanov *et al.*, Phys. Rev. **D69**, 012004 (2004); **H1**—C. Adloff *et al.*, Z. Phys. **C72**, 593 (1996); C. Adloff *et al.*, Phys. Lett. **B528**, 199 (2002); A. Aktas *et al.*, Eur. Phys. J. **C40**, 349 (2005); A. Aktas *et al.*, Eur. Phys. J. **C45**, 23 (2006); **EMC**—J.J. Aubert *et al.*, Nucl. Phys. **B213**, 31 (1983).

Inset: The bottom quark structure function  $F_2^{bb}(x)$ . For the purpose of plotting, a constant  $k(Q) = 0.01i_Q^{1.7}$  is added to  $F_2^{bb}$  where  $i_Q$  is the number of the  $Q^2$  bin, ranging from 1 ( $Q^2 = 12 \text{ GeV}^2$ ) to 5 ( $Q^2 = 650 \text{ GeV}^2$ ). References: **H1**—A. Aktas *et al.*, Eur. Phys. J. **C40**, 349 (2005); A. Aktas *et al.*, Eur. Phys. J. **C45**, 23 (2006).

Statistical and systematic errors added in quadrature are shown for both plots. The data are given as a function of  $x$  in bins of  $Q^2$ .

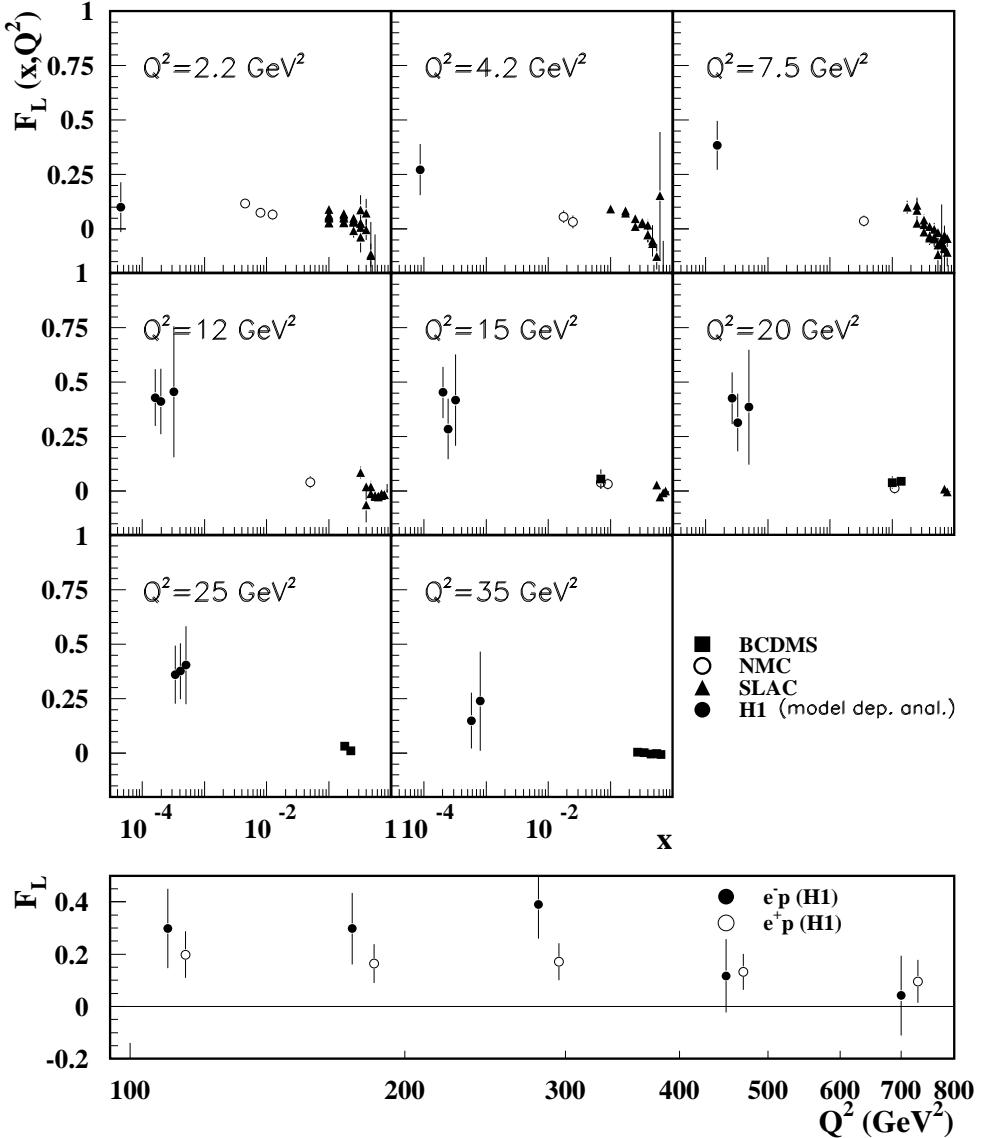

**Figure 16.11:** The structure function  $x F_3^{\gamma Z}$  measured in electroweak scattering of a) electrons on protons (H1 and ZEUS) and b) muons on carbon (BCDMS). The ZEUS points have been slightly offset in  $x$  for clarity. References: **H1**—C. Adloff *et al.*, Eur. Phys. J. **C30**, 1 (2003); **ZEUS**—S. Chekanov *et al.*, Eur. Phys. J. **C28**, 175 (2003); **BCDMS**—A. Argento *et al.*, Phys. Lett. **B140**, 142 (1984).

c) The structure function  $x F_3$  of the nucleon measured in  $\nu$ -Fe scattering. The data are plotted as a function of  $Q^2$  in bins of fixed  $x$ . For the purpose of plotting, a constant  $c(x) = 0.5(i_x - 1)$  is added to  $x F_3$ , where  $i_x$  is the number of the  $x$  bin as shown in the plot. The NuTeV points have been shifted to the nearest corresponding  $x$  bin as given in the plot and slightly offset in  $Q^2$  for clarity. References: **CCFR**—W.G. Seligman *et al.*, Phys. Rev. Lett. **79**, 1213 (1997). **NuTeV**—M. Tzanov *et al.*, Phys. Rev. **D74**, 012008 (2006).

Statistical and systematic errors added in quadrature are shown for all plots.

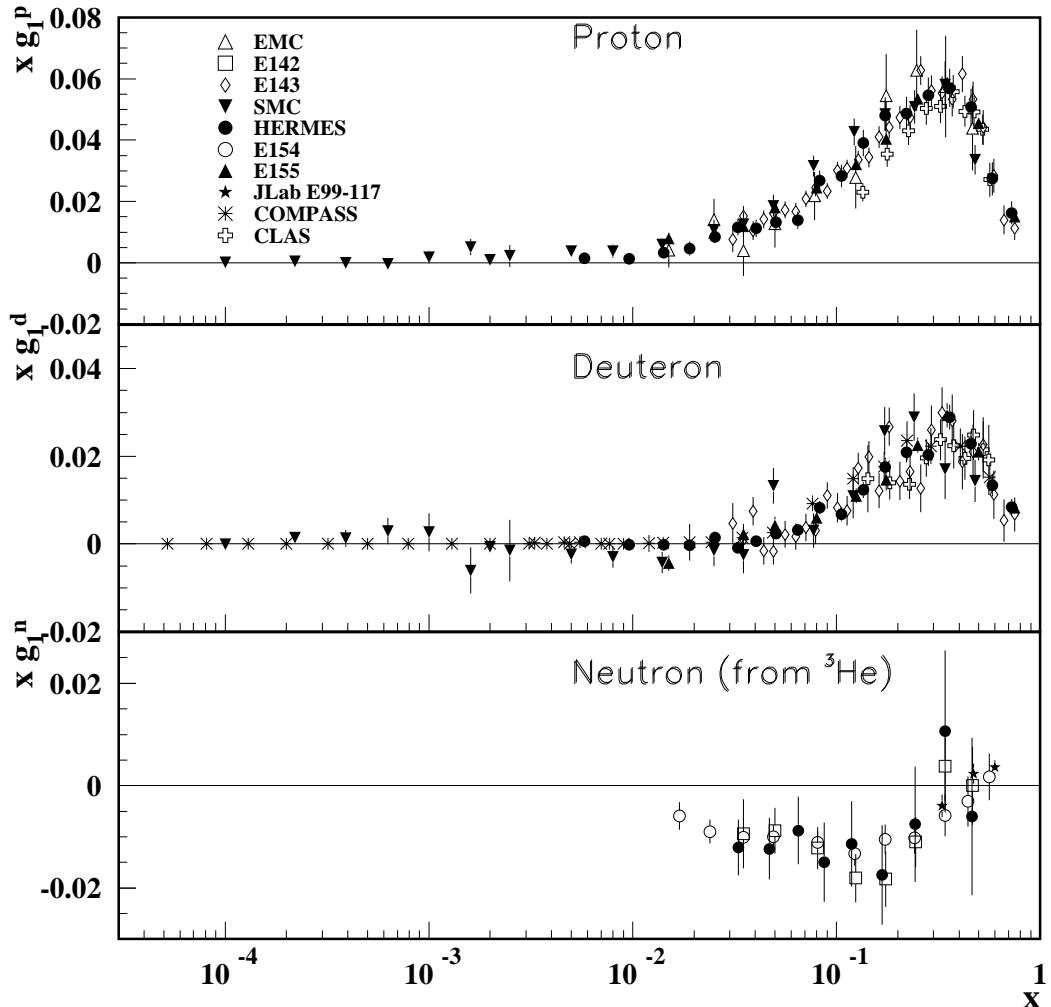

## 6 16. Structure functions

**Figure 16.12:** Top panel: The longitudinal structure function  $F_L$  as a function of  $x$  in bins of fixed  $Q^2$  measured on the proton (except for the SLAC data which also contain deuterium data). BCDMS, NMC, and SLAC results are from measurements of  $R$  (the ratio of longitudinal to transverse photon absorption cross sections) which are converted to  $F_L$  by using the BCDMS parameterization of  $F_2$  (A.C. Benvenuti *et al.*, Phys. Lett. **B223**, 485 (1989)). It is assumed that the  $Q^2$  dependence of the fixed-target data is small within a given  $Q^2$  bin. References: **H1**—C. Adloff *et al.*, Eur. Phys. J. **C21**, 33 (2001); **BCDMS**—A. Benvenuti *et al.*, Phys. Lett. **B223**, 485 (1989); **NMC**—M. Arneodo *et al.*, Nucl. Phys. **B483**, 3 (1997); **SLAC**—L.W. Whitlow *et al.*, Phys. Lett. **B250**, 193 (1990) and numerical values from the thesis of L.W. Whitlow (SLAC-357).

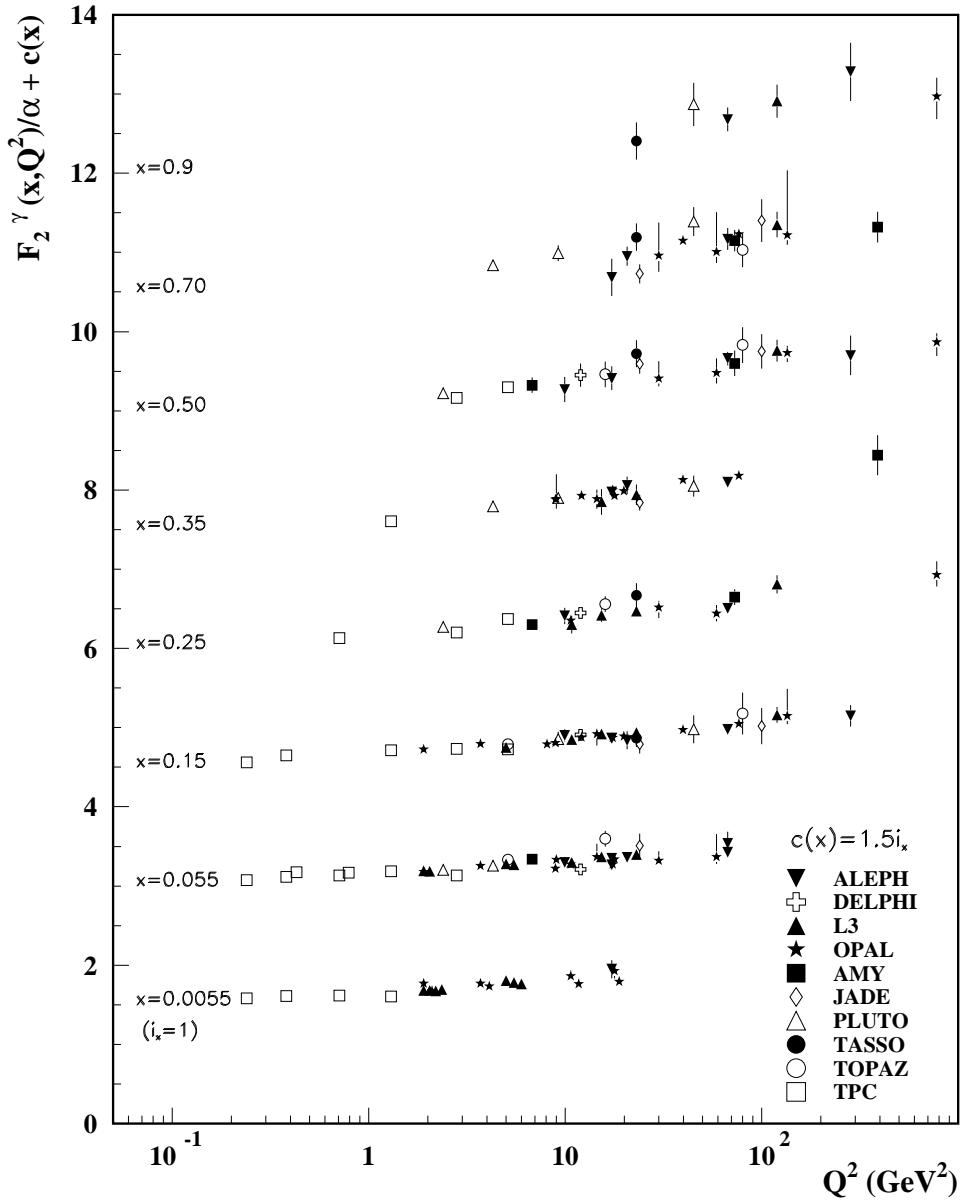

Bottom panel: Higher  $Q^2$  values of the longitudinal structure function  $F_L$  as a function of  $Q^2$  given at the measured  $x$  for  $e^+e^-$ -proton scattering. Points have been slightly offset in  $Q^2$  for clarity. References: **H1**—C. Adloff *et al.*, Eur. Phys. J. **C30**, 1 (2003).

The H1 results shown in both plots require the assumption of the validity of the QCD form for the  $F_2$  structure function in order to extract  $F_L$ . Statistical and systematic errors added in quadrature are shown for both plots.

**Figure 16.13:** The spin-dependent structure function  $xg_1(x)$  of the proton, deuteron, and neutron (from  ${}^3\text{He}$  target) measured in deep inelastic scattering of polarized electrons/positrons: E142 ( $Q^2 \sim 0.3 - 10 \text{ GeV}^2$ ), E143 ( $Q^2 \sim 0.3 - 10 \text{ GeV}^2$ ), E154 ( $Q^2 \sim 1 - 17 \text{ GeV}^2$ ), E155 ( $Q^2 \sim 1 - 40 \text{ GeV}^2$ ), JLab E99-117 ( $Q^2 \sim 2.71 - 4.83 \text{ GeV}^2$ ), HERMES ( $Q^2 \sim 0.18 - 20 \text{ GeV}^2$ ), CLAS ( $Q^2 \sim 1 - 5 \text{ GeV}^2$ ) and muons: EMC ( $Q^2 \sim 1.5 - 100 \text{ GeV}^2$ ), SMC ( $Q^2 \sim 0.01 - 100 \text{ GeV}^2$ ), COMPASS ( $Q^2 \sim 0.001 - 100 \text{ GeV}^2$ ), shown at the measured  $Q^2$  (except for EMC data given at  $Q^2 = 10.7 \text{ GeV}^2$  and E155 data given at  $Q^2 = 5 \text{ GeV}^2$ ). Note that  $g_1^n(x)$  may also be extracted by taking the difference between  $g_1^d(x)$  and  $g_1^p(x)$ , but these values have been omitted in the bottom plot for clarity. Statistical and systematic errors added in quadrature are shown. References: **EMC**—J. Ashman *et al.*, Nucl. Phys. **B328**, 1 (1989); **E142**—P.L. Anthony *et al.*, Phys. Rev. **D54**, 6620 (1996); **E143**—K. Abe *et al.*, Phys. Rev. **D58**, 112003 (1998); **SMC**—B. Adeva *et al.*, Phys. Rev. **D58**, 112001 (1998), B. Adeva *et al.*, Phys. Rev. **D60**, 072004 (1999) and Erratum-Phys. Rev. **D62**, 079902 (2000); **HERMES**—A. Airapetian *et al.*, Phys. Rev. **D75**, 012007 (2007) and K. Ackerstaff *et al.*, Phys. Lett. **B647**, 330 (2007); **CLAS**—K.V. Dharmawardane *et al.*, Phys. Lett. **B641**, 11 (2006) (which also includes resonance region data not shown on this plot).

## 8 16. Structure functions

**Figure 16.14:** The hadronic structure function of the photon  $F_2^\gamma$  divided by the fine structure constant  $\alpha$  measured in  $e^+e^-$  scattering, shown as a function of  $Q^2$  for bins of  $x$ . Data points have been shifted to the nearest corresponding  $x$  bin as given in the plot. Some points have been offset in  $Q^2$  for clarity. Statistical and systematic errors added in quadrature are shown. For the purpose of plotting, a constant  $c(x) = 1.5i_x$  is added to  $F_2^\gamma/\alpha$  where  $i_x$  is the number of the  $x$  bin, ranging from 1 ( $x = 0.0055$ ) to 8 ( $x = 0.9$ ).
